Here's a cleaned-up **this week web team assignment** based on that I started putting competitor prices and sizes already, I have attached stripe, (just need to test) and I have started putting our products on the back end and showing on the front end

Web Team Assignments

March 23–27

1. Product catalog setup

Load all products into the backend and publish them to the homepage and product sections.

Products to include:

- 1" Vinyl Blinds
- 1" Vinyl Plus Blinds
- 1" Aluminum Blinds
- 1" Aluminum Business Class Blinds
- 2" Faux Wood Blinds
- Vertical Blinds / Made to Fit Any Size
- Stock Vertical Blinds
- 1" vinyl mini blind
- 1" vinyl plus mini blinds
- 1" aluminum mini blind
-

Stock Vertical Blind sizes to load:

- 54 x 84
- 66 x 84
- 78 x 84
- 102 x 84

- 104 x 84
- 110 x 84

2. Competitor product matching

Match each of our products against comparable products on Blinds.com and Lowe's so our catalog structure mirrors the market. Relevant competitor references include Blinds.com 1 Inch Mini Blinds, 2 Inch Faux Wood Blinds, and Vinyl Vertical Blinds, while Lowe's carries faux wood, aluminum mini blinds, and vertical blinds in both stock and cut-to-size formats. (Blinds.com)

Team needs to:

- Map each of our SKUs to a closest competitor equivalent
- Confirm size coverage for each product line
- Identify any missing widths, heights, colors, controls, or finishes
- Make sure our naming and product hierarchy are clean and competitive

3. Product page design match

Use this competitor page as the design benchmark for layout and merchandising:

- Blinds.com Cordless 2 Inch Faux Wood Blinds page

That page includes the kind of product detail structure you want to resemble: strong headline, product description, review/social proof, measurement/specs, shipping estimate, and upgrade/options flow. (Blinds.com). default to 15 % cheaper than competitor but we can also manually change our price on the back end and it shows on the front end

Team needs to make our product pages resemble competitor standards for:

- Main image gallery
- Product title and subtitle
- Pricing display
- Size selector
- Option selector
- Specs/measurements section

- Shipping/lead time section
- CTA placement
- Reviews/testimonials area
- Related products / upsells

4. Pricing and size data completion

Complete all missing sizes and prices for our products.

Team needs to:

- Enter all current internal prices
- Fill in all standard sizes
- Flag missing pricing data before launch
- Confirm stock vertical blind sizes are visible on PDP and backend
- Make sure backend product data matches what shows on homepage and category pages

5. Competitor price monitoring test

You already coded the competitor-pricing alert system. This week the team needs to test it.

Test requirements:

- Verify daily price refresh is running
- Verify competitor data is being pulled from Blinds.com and Lowe's
- Confirm our matched products are correct
- Confirm notifications trigger when competitor pricing is lower than ours
- Confirm alert destination emails are correct
- Log false matches or scraping failures
- Confirm fallback handling when a competitor page changes or fails

Blinds.com actively promotes sale pricing and rotating discounts on major blind categories, so this needs to be tested against real live promo behavior rather than static prices. (Blinds.com)

6. Stripe checkout testing

Team needs to test the Stripe setup end to end.

Test items:

- Product added to cart with the right size and price
- Checkout completes
- Payment authorizes successfully
- Confirmation email sends
- Admin order notification sends
- Failed card behavior works correctly
- Refund/cancel test path works if enabled

7. Homepage product visibility

Make sure homepage includes the full product range and routes correctly into each category/product page.

Homepage needs:

- All blind categories visible
- Clear product tiles
- Main CTA buttons
- Featured products section
- Links to full product pages

Deliverables Due This Week

By end of week, the web team should have:

- All products loaded into backend
- Homepage updated with all product categories
- Stock Vertical Blind sizes loaded correctly
- Competitor product matching completed
- Missing sizes/prices list completed

- Product page layout updated to resemble competitor standard
- Competitor price-monitoring test completed
- Stripe checkout test completed
- Bug list documented

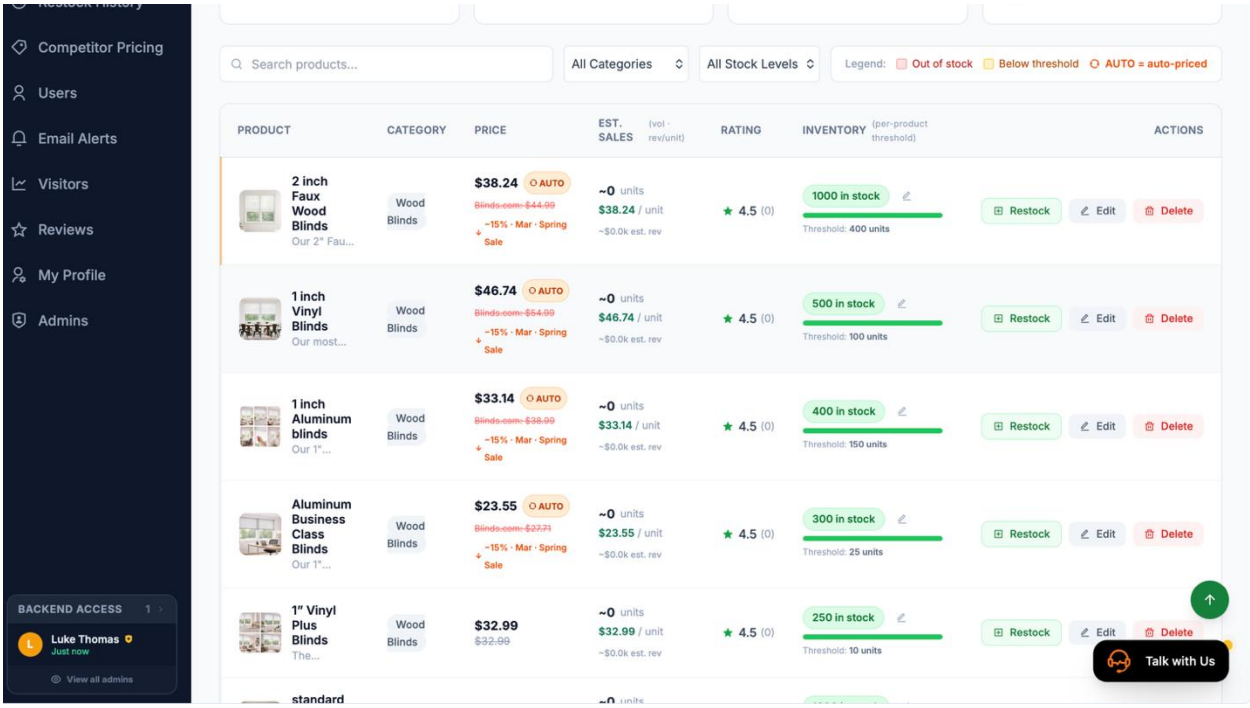
Internal QA Checklist

Before signing off:

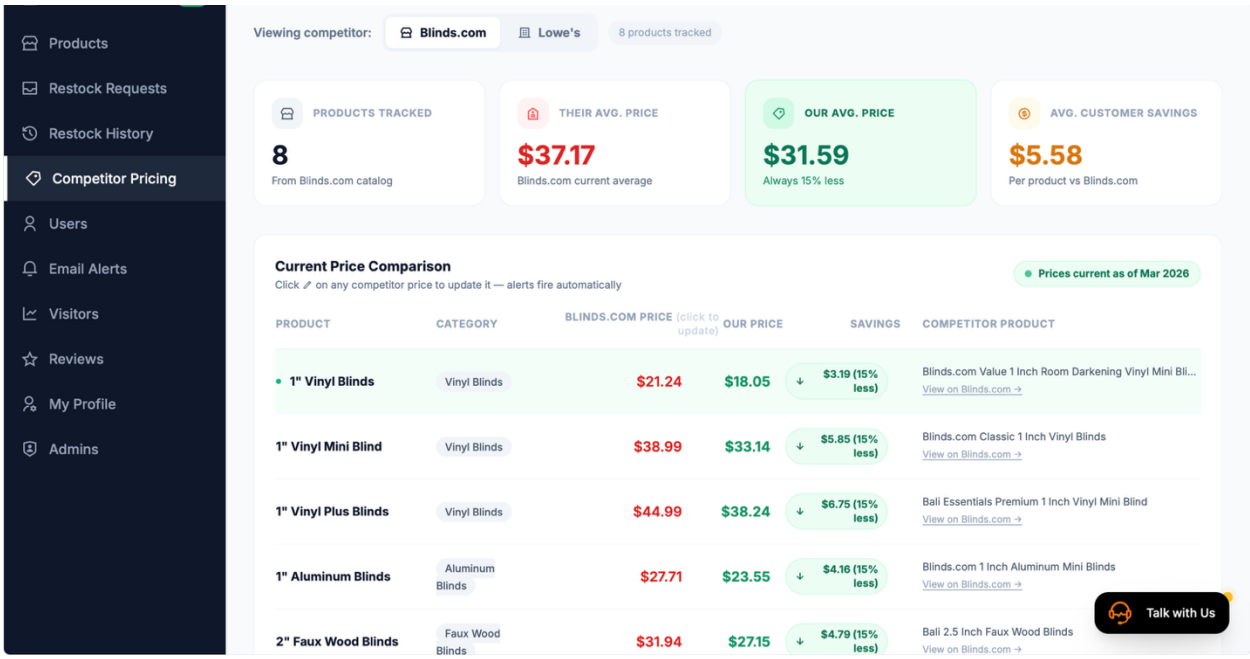
- Product names are consistent
- Sizes display correctly
- Prices display correctly
- Mobile layout works
- Product pages match competitor polish level
- Alerts send when competitor price is cheaper
- Checkout and emails work
- No broken links or missing images
- Lets move the whole site off readdy and the backend

  AI programs I would like to work with and integrate.

  Resend.con, Holo.ai, stripe.co, supabose, instantly, AI phone call software, XERO for invoicing

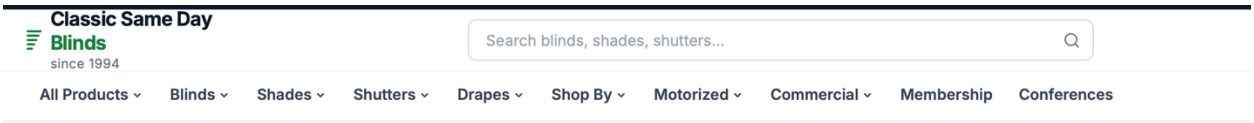


Making sure our products show on the backend and all sizes and prices and on the front end.



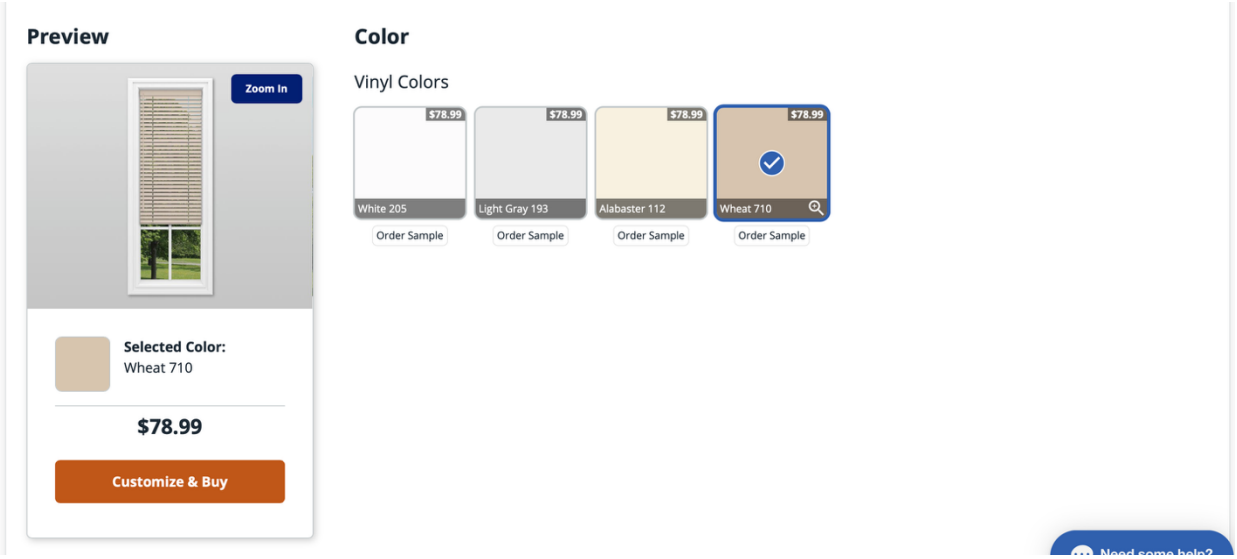
Have all the competitor prices and sizes and prices on the back end as well

Make sure the top of the home live page matches only the products we have and get rid of the other
tabs.



Phase 2

- Make sure we have all the sizes and prices of competitor and when a customer changes the size of the live site and it show the difference in price when they click on the sizes, and on the backend our admins can change the prices per product by the size. And on the front end
- Create google Cloud to covert the website
- Have the link on the back end on the competitor prices to go to their exact product
- Make sure our reviews match the top and bottom of the product pages
- When sending a quote from the cart page show the size of blind the cost and quantity and company name and person name and who the salesperson from classica same day blinds optional is and it's been paid.
- https://www.classicsameday.com/blind-products make sure we have all these products and prices on the back end and live page and quality photos
- Test stripe and testing the invoices and making sure it has all the detail
- Our products have good quality photos the customer can go through
- Test email alert when someone orders it comes to an admin email and reflects everything
- Create an amazon business page
- Log into google ads and set It up in ready for when we want to launch the live site to the customers
- Keeping track of inventory and when someone orders it shows on the back end that inventory is gone
- Make sure this menu only shows the products we have a not other
- 
Email orders to customer like amazon does when they bought something



- Whatever our competitors colors are implement it for our products and have this preview section for each of our products page and it changes the price when you select the color and shows you the color
